 Assignment 2
次の日付まで利用不可 2026年10月12日 14:30 | 期限 2026年10月18日 23:59

Plan

- Goal 1: Creating your own corpus (In-class activity)
- Goal 2: Reading research paper (Assignment)
- Goal 3: Write your own paper (Group project)

What is a corpus?

A corpus is a **principled** collection of language data.

Ex. Written text, spoken language, multimodal recordings, ...

In this class, we will build a bilingual corpus for INTERLANGUAGE.

Interlanguage

- A term coined by Selinker (1972):
Interlanguage refers to the language system that each learner constructs at any given point in development.

I runned away.

I ran away.

Interlanguage is consistent

- Interlanguages are not more than the sum of target input & the first language
- “L2 learners end up building mental representations that are different from what the target input in their surrounding environment (be it the classroom or the wider society) looks like, and also different from the grammar representations available in their first language. (Ortega 2008: 112)”

Interlanguage is consistent

- Intransitive verbs

- (1) **Unaccusative verbs**

- a. People **fell** in love.

- b.* People **was fallen** in love. (frequent in IL)

- Overpassivization

- (2) **Unergative verbs**

- a. John **walked** in the rain.

- b.* People **was walked** in the rain. (rare even in IL)

Based on our interlanguage corpus, we will ...

1. Learn how to annotate a text.
2. Read an article of Interlanguage
3. Form a group and write a paper about how interlanguage develops.

Second step

Second Language Research 16,4 (2000); pp. 293–324

What is happened may not be what appears to be happening: a corpus study of 'passive' unaccusatives in L2 English

Hiroyuki Oshita *Ohio University*

Second Language (L2) researchers have been studying 'passive' unaccusative errors such as *What was happened?*, but have not yet reached a consensus about the ultimate cause of this unique interlanguage structure. This article critically reviews five major accounts proposed in the literature, namely:

- transfer of a compound tense/aspect structure in the learner's first language (L1);
- overgeneralization of adjectival passive formation in English;
- nontarget lexical causativization;
- identification of the passive morphosyntax with the lack of a logical subject; and
- nontarget overt marking of syntactic NP movement.

By analysing each account in terms of its ramifications in light of the data already available in the literature and additional data from a large corpus of nonnative English, I demonstrate that the most plausible account of the 'passive' unaccusative structure is to regard it as an overt marker of NP movement, an overgeneralization of the passive morphosyntax of the target English.

I Introduction

Until recent years, the scarcity of serious research on lexical development was a concern for Second Language (L2) researchers interested in the grammatical analysis of interlanguage (IL) systems (Gass and Schachter, 1989: 201; Gass and Selinker, 1994: 270; Juffs, 1996: 1–2). An indication that this situation has finally started to

Assignments

Answer the questions available at [my website](#)

Corpus Linguistics

Reading argument 1

Name: _____ ID: _____

Question 1 According to the text, what is the key insight regarding errors like “was happened”?

- (A) They were newly discovered in the 1980s by SLA researchers studying beginner-level ESL students.
- (B) Although noted in the 1970s, they later became recognized as being specific to certain verbs.
- (C) They were proven in the 1970s to occur randomly across all categories of intransitive verbs regardless of learner level.

Question 2 Why does the author introduce the “Unaccusative Hypothesis” right after introducing the student errors?

- (A) To explain the theoretical framework showing why this specific class of intransitive verbs has unique properties compared to other intransitives.
- (B) To argue that second language learners must be explicitly taught these complex grammar rules
